

The Problem — Money Laundering is Invisible

A criminal never sends money directly. He splits it. He layers it. He disappears.

Reality:

A single illegal transaction passes through 10+ accounts, 5+ banks, 3+ cities before reaching its final destination.

Each account looks innocent on its own.
No single bank sees the full picture.
By the time investigators connect the dots — the money is already gone.

The Scale:

- ₹10L Crore+ laundered annually in India
- 10–20 Hops average layering depth per case
- 3–5 Days average manual investigation time
- 0 Tools that visually map the full trail

[Criminal] →→→ [Acc A] → [Acc B] → [Acc C] → [Acc D] →→→ [Dealer]
 ↘ [Acc E] → [Acc F] ↗

"By the time investigators connect the dots — the money is already gone."

Proposed Solution

TraceNetX — One Platform. Every Account. The Full Trail.

4 feature cards:

-  **Graph Intelligence**
Links every suspicious account into a live transaction network
-  **Receiver-Centric Analysis**
We start from the DESTINATION.
Who received it? How? From where?
-  **Identity Fusion**
Matches accounts across cases
via shared IP, phone & email
-  **Spider Map**
Interactive visual money trail
— full network in one click

Color: Red = High risk, Yellow = Medium, Green = Low

“From scattered transactions to a clear money trail in seconds.”

How It Works

— The Workflow

"From raw transaction data to actionable intelligence in seconds."

The Spider Map — See What Spreadsheets Can't

Legend & Features:

Node Colors:

- Red = High Risk Account
- Yellow = Medium Risk
- Green = Low Risk / Clean

Arrow thickness = Transaction volume

Arrow direction = Money flow direction

What investigators can do:

- Click any node = full transaction history
- Filter by IP / phone / email / date
- Trace multi-hop chains across 10+ accounts
- Link spider maps across different cases
- Export suspicious paths for court evidence

Filter
IP Address
Phone Number
Date Range
Risk Level

"The criminal hides in the sender network — but always reveals himself at the destination."
